Choosing the right market for Haiti's agricultural products

Date:

Sep 24, 2021

Prepared by:

Kesnel Samuel Jean Philippe

Agenda

What we'll discuss today

- Introduction
- Project goals
- Relevant Analytics
- Recommendations
- References
- Conclusion

01 Introduction

This project focuses on how hunger levels and food prices are rising in the country because the food we consume every day are food that we imported from the international.

With this project the government will be able to know which market will be the best for their agricultural products, so they can promote and export our Haitian agricultural products.

Methodology

1

Analyze the dataset that we are going to collect to better understand and give some insight on the international trade

2

Choose the best place with the High demand for agricultural products so that Haiti can promote and sell its products

03

Relevant Analytics

For the realization of this project we will use the World Trade Organization(WTO) database, Where we can get all the data we need to carry out this project

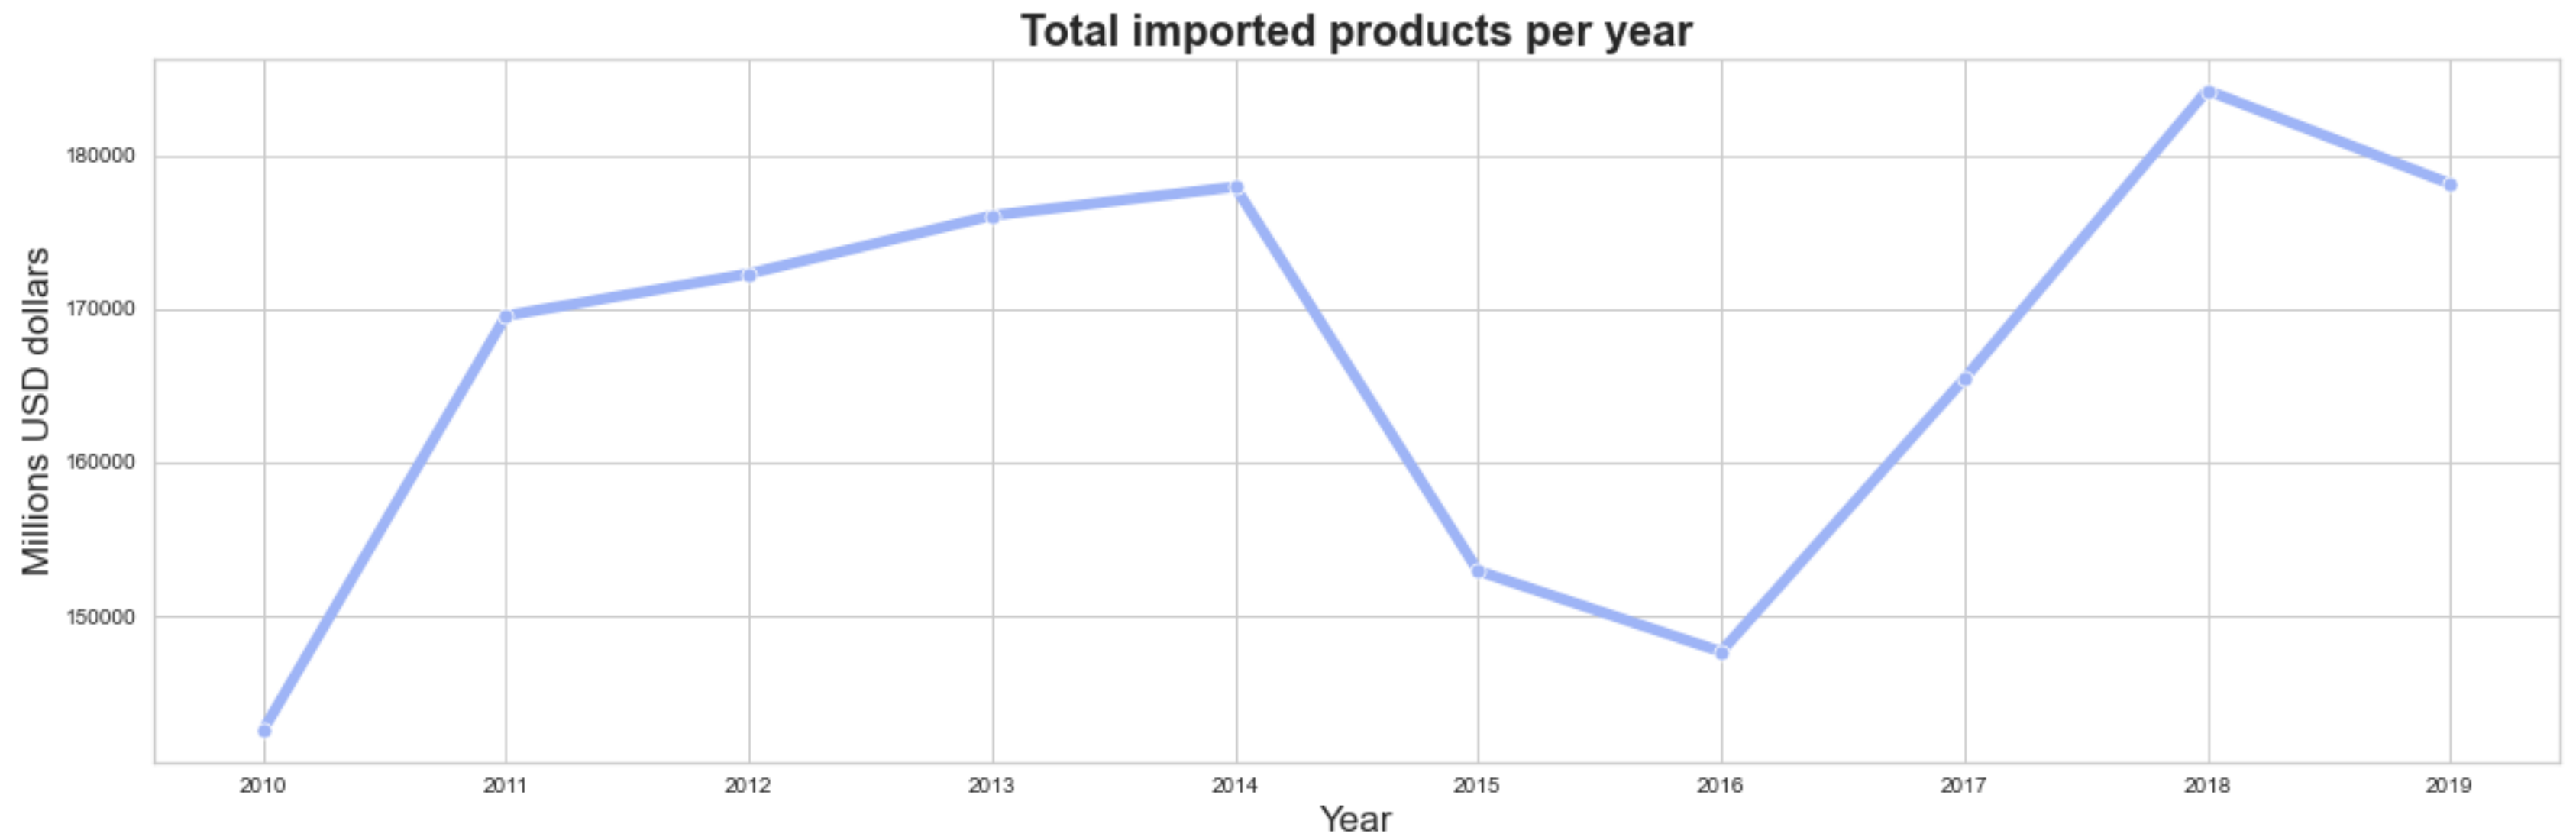

Data Source

Overview

Product/Sector ↑	Partner Economy ↑	Year ←	2010	2011	2012	2013	2014	2016	2017	2018	2019
SI3_AGG - TO - Total merchandise	World		15,303,993	18,343,601	18,514,486	18,969,946	19,011,072	16,045,249	17,742,931	19,550,439	19,014,680

Recommendations

01

The Haitian government must establish a good relationship with the governments of these countries

02

Use of data science in the agriculture field, this can be helpful for Weather Prediction, and climate changes

03

The government must provide good agricultural tools for our farmers so that they can work faster
